YeastFlow – Home of Yeast

YF-114

Crazy Hazy

This NEIPA-focused strain is a top choice for hazy, juicy beers. YF-114 promotes a soft mouthfeel and moderate haze while generating pronounced pear and peach esters. Its high fermentation activity allows brewers to achieve dry yet aromatic ales. The yeast accentuates hop-derived flavors, highlighting tropical and stone fruit characteristics. It produces a clean, balanced finish that complements juicy hop profiles. YF-114 is forgiving of slight temperature variations, making it ideal for both homebrewers and professional IPA brewers.

Attenuation	75-82	Strain: <i>Saccharomyces cerevisiae</i>	Flocculant: low-medium
Temp.opt. (°C)	17-21	Fermentation: Ale	Region: British
ABV	12	Beer Type: IPA - NEIPA

--	---

The packages contain over $2,5 \cdot 10^9$ $\frac{\text{Living yeast cell}}{\text{ml}}$

Each liter of yeast contains approximately 2,500 billion viable cells, which is sufficient for pitching around 500 L of wort. Accordingly, 2 L of yeast (about 5,000 billion cells) is recommended for 1,000 L of wort, while 4 L of yeast (about 10,000 billion cells) is suitable for approximately 2,000 L of wort. For low-temperature fermentations and for high-gravity beers (above 18 °P), it is advisable to double the amount of yeast to ensure optimal fermentation performance.

STORAGE

It is recommended to use the yeast as soon as possible after purchase to ensure optimal performance. Under normal circumstances, it can be stored in a refrigerator at 2-5 °C for up to four months, until the indicated best before date. After this period, the appearance and clarity of the product will remain unchanged, but the number of living cells gradually decreases, which may affect its activity during fermentation. For best results, always keep the packaging sealed and refrigerated, and allow the yeast to reach room temperature before use.

SHELF LIFE

This yeast is freshly made and bottled to deliver maximum vitality and performance. When kept at 2-5 °C, it preserves its intended quality for up to four months from the packaging date, as indicated by the best before label. After this period, the visual appearance of the product remains unchanged, but the number of viable cells slowly declines, which may reduce fermentation efficiency over time. For best results, it is recommended to use the yeast as soon as possible within its shelf life.

The product is available in 1-liter and 2-liter bottles.
