YeastFlow – Home of Yeast

YF-301

Pils'ing them softly (*Pils style lager*)

A classic Bayer-style lager yeast, YF-301 is recommended for Pilsner-type beers. It ferments at lower temperatures to produce a clean, slightly malty beer with a delicate ester profile. While it can tolerate a broader range of temperatures, a traditional diacetyl rest ensures a polished finish. YF-301 preserves hop aroma while emphasizing a crisp, refreshing malt character. Its reliability and clean fermentation make it ideal for brewers aiming for a classic German-style lager with subtle complexity and drinkability.

Attenuation	80-84	Strain: <i>Saccharomyces pastorianus</i>	Flocculant: high
Temp.opt. (°C)	12-18	Fermentation: Lager	Region: German
ABV	11	Beer Type: Märzen – Helles – German Lager – Bock – German Pilsner

--	---

The packages contain over $2,5 \cdot 10^9$ $\frac{\text{Living yeast cell}}{\text{ml}}$

Each liter of yeast contains approximately 2,500 billion viable cells, which is sufficient for pitching around 500 L of wort. Accordingly, 2 L of yeast (about 5,000 billion cells) is recommended for 1,000 L of wort, while 4 L of yeast (about 10,000 billion cells) is suitable for approximately 2,000 L of wort. For low-temperature fermentations and for high-gravity beers (above 18 °P), it is advisable to double the amount of yeast to ensure optimal fermentation performance.

STORAGE

It is recommended to use the yeast as soon as possible after purchase to ensure optimal performance. Under normal circumstances, it can be stored in a refrigerator at 2-5 °C for up to four months, until the indicated best before date. After this period, the appearance and clarity of the product will remain unchanged, but the number of living cells gradually decreases, which may affect its activity during fermentation. For best results, always keep the packaging sealed and refrigerated, and allow the yeast to reach room temperature before use.

SHELF LIFE

This yeast is freshly made and bottled to deliver maximum vitality and performance. When kept at 2-5 °C, it preserves its intended quality for up to four months from the packaging date, as indicated by the best before label. After this period, the visual appearance of the product remains unchanged, but the number of viable cells slowly declines, which may reduce fermentation efficiency over time. For best results, it is recommended to use the yeast as soon as possible within its shelf life.

The product is available in 1-liter and 2-liter bottles.
