

TECHNICAL DATA SHEET

YeastFlow – Home of Yeast

YF-503

Hotspur Viking (Norwegian farmhouse style ale)

Originating from Norway, YF-503 is a farmhouse ale yeast that tolerates high temperatures up to 40°C without producing harsh esters or off-flavors. It develops bright citrus and orange peel notes that evolve into gentle peach tones as temperature increases. This strain is forgiving and easy to work with for brewers lacking precise temperature control, delivering a clean, aromatic beer. Its consistent performance highlights subtle malt character while emphasizing hop and spice nuances.

Attenuation	78-83	Strain: <i>Saccharomyces cerevisiae</i>	Flocculant: high
Temp.opt. (°C)	21-38	Fermentation: Ale	Region: Norwegian
ABV	10	Beer Type: Kveik

--	---

The packages contain over $2,5 \cdot 10^9$ $\frac{\text{Living yeast cell}}{\text{ml}}$

Each liter of yeast contains approximately 2,500 billion viable cells, which is sufficient for pitching around 500 L of wort. Accordingly, 2 L of yeast (about 5,000 billion cells) is recommended for 1,000 L of wort, while 4 L of yeast (about 10,000 billion cells) is suitable for approximately 2,000 L of wort. For low-temperature fermentations and for high-gravity beers (above 18 °P), it is advisable to double the amount of yeast to ensure optimal fermentation performance.

STORAGE

It is recommended to use the yeast as soon as possible after purchase to ensure optimal performance. Under normal circumstances, it can be stored in a refrigerator at 2-5 °C for up to four months, until the indicated best before date. After this period, the appearance and clarity of the product will remain unchanged, but the number of living cells gradually decreases, which may affect its activity during fermentation. For best results, always keep the packaging sealed and refrigerated, and allow the yeast to reach room temperature before use.

SHELF LIFE

This yeast is freshly made and bottled to deliver maximum vitality and performance. When kept at 2-5 °C, it preserves its intended quality for up to four months from the packaging date, as indicated by the best before label. After this period, the visual appearance of the product remains unchanged, but the number of viable cells slowly declines, which may reduce fermentation efficiency over time. For best results, it is recommended to use the yeast as soon as possible within its shelf life.

The product is available in 1-liter and 2-liter bottles.
